Giggle Reloaded (GGRD) Whitepaper v3.1

BSC Mainnet Deployment Specification and Operations Reference

Version: v3.1 (BSC)

Network: BNB Smart Chain Mainnet (chainId 56)

Token: Giggle Reloaded (GGRD)

Total Supply: 10,000,000 fixed

Last update: 2026-03-10

Official site: ggrd.me

Table of Contents

- 1. Scope and source of truth
- 2. Token specification
- 3. Mainnet addresses
- 4. Presale escrow model (USDC)
- 5. Governance model
- 6. Charity vesting
- 7. Staking v1
- 8. Airdrop framework
- 9. Liquidity and LP lock plan
- 10. Risk and legal notices

1. Scope and Source of Truth

This document describes GGRD tokenomics and smart-contract behavior for BNB Smart Chain mainnet, aligned with project brief v3.1 and deployed contract logic.

- Fixed supply token with no post-deploy mint.
- 0% transfer tax.
- No blacklist and no freeze logic.
- Governance via Safe multisig plus timelocks.
- USDC presale escrow with success/fail settlement paths.

Reference repositories: smart contracts and deployment artifacts maintained in the official project repositories, with production addresses verifiable on BscScan.

2. Token Specification

Field	Value
Name	Giggle Reloaded
Symbol	GGRD
Standard	ERC-20
Network	BNB Smart Chain mainnet
Decimals	18
Total supply	10,000,000 GGRD (fixed)
Transfer tax	0%
Post-deploy mint	Not available
Blacklist / freeze	Not available

Core allocation model

Component	Amount	Share	Implementation anchor
Presale allocation cap	3,000,000 GGRD	30%	`PresaleEscrow8020.tokenCap()`
Charity allocation	2,000,000 GGRD	20%	Charity vesting model 40/30/30
Staking reward cap	3,000,000 GGRD	30%	`GGRDStakingMultiV1.REWARD_POOL_CAP()`
Operations and liquidity	2,000,000 GGRD	20%	Governance-managed distribution

3. Mainnet Addresses

Component	Address	Explorer
GGRD Token	`0xA0d5663d57b7D7EF975D2F02BcAEaf5c94c671f9`	BscScan
PresaleEscrow8020	`0xd8983534dd3c369d85127f6C9B85d98768139387`	BscScan
GGRDStakingMultiV1	`0x05d803135bc09e9E5006CA75C533377D7Ea0A34b`	BscScan
CharityVesting403030	`0xE2993F0C8D2020dD9866E2d6dC5AA1D62b7C8fDC`	BscScan
MerkleAirdrop	`0x9F64E78185ee697783E0c9ebA0F66131FFCedBD6`	BscScan
Timelock Short (48h)	`0xBC4655E8D5A4A4B16bD30db2fFBC94Ed05AbcE87`	BscScan
Timelock Long (72h)	`0xd4b5f94f7cF8Eb79bEd2f3Aa5693d9F97D573E31`	BscScan
USDC pay token	`0x8AC76a51cc950d9822D68b83fE1Ad97B32Cd580d`	BscScan
Governance Safe (2/3)	`0x28218d08f6D2084eBd7CeF3f582139E7417b6300`	BscScan
Liquidity Safe (2/3)	`0x7677AC2712d161e7F75fC4316E8B3dC3FaC01009`	BscScan
Marketing Safe (2/3)	`0xF2922343AdF6F2631A2f1e9b9b11c9d269f3874D`	BscScan
Charity Safe A	`0xd58B8D79deC67F8731267B929D24A4923Bac59a3`	BscScan

4. Presale Escrow Model (USDC)

Key parameters

- Accepted asset: USDC on BSC.
- Duration: 21 days.
- Softcap: 20,000 USDC.
- Hardcap: 31,250 USDC.
- Minimum buy: 50 USDC.
- Global max per wallet: 3,000 USDC.
- Configured window: 2026-03-10 01:15:19 UTC to 2026-03-31 01:15:19 UTC.

Current on-chain status snapshot

- Snapshot time: 2026-03-10 03:00 UTC.
- Presale state: live and not finalized.

- Active stage at snapshot: Stage 1.
- Raised amount at snapshot: 0 USDC.
- Sold amount at snapshot: 0 GGRD.
- Live tracker: ggrd.me/#presale (on-chain refresh).

Stage table

Stage	Window (UTC)	Allocation	Price	Wallet cap	Status at snapshot
1	2026-03-10 01:15:19 -> 2026-03-15 01:15:19	1,000,000 GGRD	0.0085 USDC	500 USDC	Active
2	2026-03-15 01:15:19 -> 2026-03-20 01:15:19	800,000 GGRD	0.0100 USDC	750 USDC	Upcoming
3	2026-03-20 01:15:19 -> 2026-03-26 01:15:19	700,000 GGRD	0.0115 USDC	1,000 USDC	Upcoming
4	2026-03-26 01:15:19 -> 2026-03-31 01:15:19	500,000 GGRD	0.0134 USDC	1,500 USDC	Upcoming

Settlement logic

- If presale succeeds, finalize transfers raised USDC as 80% to liquidity wallet and 20% to marketing wallet.
- If presale fails (below softcap), each buyer can claim 100% refund in USDC.
- On success, buyer claim schedule is 50% immediate plus 50% linear over 60 days.

5. Governance Model

- Operational governance actor: Safe multisig with 2/3 threshold.
- Timelock short: 48h for selected operations.
- Timelock long: 72h for high-impact operations.
- Ownership targets include staking and airdrop modules as configured during deployment.

Governance model is designed to reduce single-signer risk and enforce explicit delay for critical actions.

6. Charity Vesting

- Allocation target: 2,000,000 GGRD (20% of total supply).
- Split: 40% / 30% / 30% across A/B/C beneficiary addresses.
- Cliff: 12 months.
- Linear release period: 24 months after cliff start reference.

Current operational setup may map A/B/C to the same wallet. This preserves vesting logic while allowing simplified wallet operations.

7. Staking v1

Parameter	Value
Model	Multi-position staking
APR	10%
Minimum lock for rewards	30 days
Early withdraw penalty	10% and zero rewards
Program duration	24 months
Max total staked	5,000,000 GGRD
Lifetime reward funding cap	3,000,000 GGRD

8. Airdrop Framework

- Contract type: multi-round Merkle airdrop.
- Each round defines root, time window and funded amount.
- Expired leftovers can be swept by governance after deadline.
- This model supports deterministic, auditable campaign distributions.

9. Liquidity and LP Lock Plan

- Main pair target: GGRD / USDC.

- Reference launch ratio from spec: 25,000 USDC paired with about 1,200,000 GGRD.
- LP lock target: 12 months.
- LP locker publication follows pair creation and lock transaction execution.

At whitepaper update time, LP locker address can be pending until LP token exists.

10. Risk and Legal Notices

- GGRD is a high-risk crypto asset with potential total loss.
- This document is not investment, legal or tax advice.
- Smart-contract execution depends on chain conditions and external infrastructure.
- Users should verify every address and transaction independently before acting.
